---

THE present intercourse between this country and Spain, and its foreign possessions, being established on a broad basis, the utility of this new Dictionary will, it is hoped, obtain and share that distinguished patronage, which an enlightened nation never fails to bestow on labours conducive to general improvement, and already conferred eminently on its Author for other national works of a similar nature. Its size, the accurate and distinct definition of words, their great increase—all these combined advantages will prove highly beneficial to those who visit those countries either for pleasure, or civil, or mercantile pursuits.

In offering this new work to the public, the chief object of the Author has been to remove the many imperfections encountered in the Dictionaries extant, and facilitate the acquirement of a language both sublime and useful. In it will be found, in the two Parts, a definite correspondent meaning to every word, free from any vague circuitous explication, which every student must naturally know in his own language, and which circumlocution prevents him from conveying his ideas in a proper and concise manner, for want of an adequate expression. Another most important deficiency is also filled up by affixing to every noun its gender and number—a part which, although most

essential to complete every Dictionary, is yet omitted in the English and Spanish side of those in present use. All references to other words of a similar sense are carefully avoided, as every one may contain its own meaning without being directed to another or more, where the repetition of the same is generally the result. To prevent every obstruction to learning, in the Spanish and English Part, words spelt according to either the new or old style will be found in their alphabetical order.

Should the present work meet with the approbation of a discerning public, and promote the end in view, the long and arduous labours of the Author will be amply compensated, and his most earnest wish most fully satisfied.
